Building More Profit Into Your Homes

PrecisionBuilder™

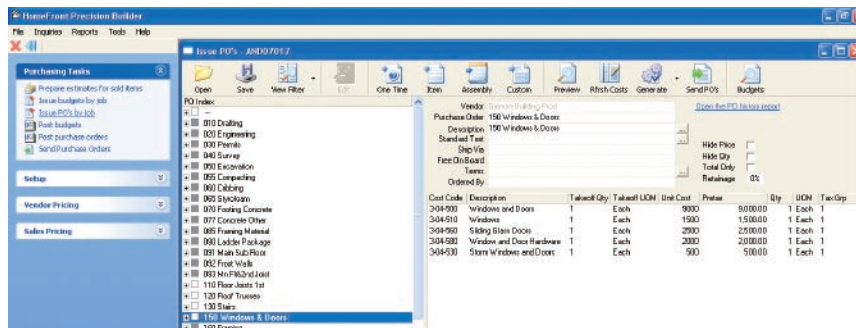

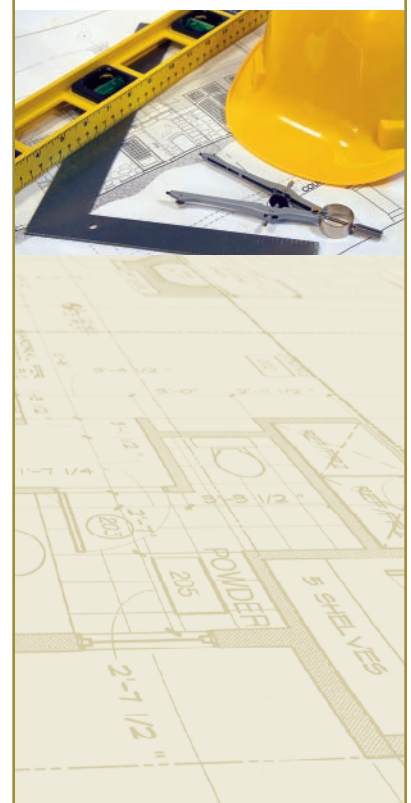

FROM Cost & Price Management TO Model, Option and Custom Change Take Off TO Purchase Orders

PrecisionBuilder empowers you, the home builder, with a fast and efficient way to update and maintain your model and option price books, with linked purchase orders. As your costs may change frequently, you need business systems that can respond quickly to those changes in order to maintain proper pricing of your models and options. **PrecisionBuilder** is the first product on the market to allow model and option pricing based on up to 12 forecasted cost periods. With **PrecisionBuilder**, builders can run margin scenarios of their models and options based on current or future costs.

PrecisionBuilder also offers homebuilders the benefits of a "sales to estimating to purchasing process solution." By embedding the power of Sage Timberline Office™ Estimating Takeoff into **PrecisionBuilder** you can now complete the process in one interface using HomeFront.

PrecisionBuilder offers several significant benefits for builders including:

- Shortened implementation time with tools that build up your price book with linked purchase orders from an Excel spreadsheet

PrecisionBuilder™ *continued*

- Quick creation of budgets and purchase orders based on model and option selections made in the sales center

- Embedded interface to Sage Timberline Office™ Estimating for complex takeoff
- Electronic real-time price book pricing by market value or mark-up and margin
- Full integration into accounting systems using Sage Timberline Office,™ providing homebuilders with anytime access to pricing and cost data before, during, and after construction

Sage Timberline Office™ Integration

PrecisionBuilder is the only Estimating and Purchasing management software that offers embedded integration with industry leading Sage Timberline Office™ Accounting and Estimating, alleviating tedious import and export routines and practices.

PrecisionBuilder is the intelligent management solution for custom and semi-custom builders. Many software products are tailored toward the larger production builder but do not respond to the custom builder's need to make frequent changes. PrecisionBuilder offers the ability to do a take off, apply mark-up, and incorporate it immediately into a custom option or change order.
